

Changing Amiga SWOS Graphics

Contents

1.0.0	Summary	3
2.0.0	Required Software	4
3.0.0	Converting Graphics.....	5
4.0.0	SWOS Pitch Graphics Converter Program	8
5.0.0	Editing Graphics	10
6.0.0	Credits	14

1.0.0 Summary

This document is to be read in conjunction with the video on YouTube.
Together the material describes how the pitch graphics in the Amiga version
of Sensible World of Soccer 96/97 can be modified.

2.0.0 Required Software

Windows

-  GIMP
-  WinUAE

Amiga

-  ArtPRO V0.9
-  SWOSEd V1.85
-  Deluxe Paint

3.0.0 Converting Graphics

3.1.0 File Index

File Name	Description
CHARSET.RAW	Text/character set for within gameplay
CJCBENCH.RAW	Substitute bench and referee graphics
CJCBITS.RAW	Goal/Net and corner flag graphics
CJCGRAFS.RAW	Score line, timer and rotating advertisement board graphics
CJCTEAM1.RAW	Outfield player graphics 1
CJCTEAM2.RAW	Outfield player graphics 2
CJCTEAM3.RAW	Outfield player graphics 3
CJCTEAMG.RAW	Goal keeper graphics
DISK22.RAW	Insert disk 2 notification
LOADER00.RAW	Opening Sensible Software loading screen graphic
LOADER01.RAW	SWOS title screen graphic
LOADER1.RAW	Credits screen 1. Presents
LOADER10.RAW	Credits screen 10. Sensible Ltd
LOADER2.RAW	Credits screen 2. Published
LOADER3.RAW	Credits screen 3. Game Design
LOADER4.RAW	Credits screen 4. Program code
LOADER5.RAW	Credits screen 5. Graphics
LOADER6.RAW	Credits screen 6. Music & SFX
LOADER7.RAW	Credits screen 7. Original soundtrack
LOADER8A.RAW	Credits screen 8A. Research
LOADER8B.RAW	Credits screen 8B. Play testing
LOADER9.RAW	Credits screen 9. Executive producer
MENUBG.RAW	Menu background image 1
MENUBG2.RAW	Menu background image 2
MENUS.RAW	Team selection menu graphics
MENUS2.RAW	Team tactics menu graphics
OLDDISK1.RAW	Insert disk 1 notification
SOCCER_S.RAW	Spinning R replay graphics
SWCPICH1.MAP	This pitch graphic relates to certain teams
SWCPICH2.MAP	This pitch graphic relates to certain teams e.g. Sheffield Utd
SWCPICH3.MAP	This pitch graphic relates to certain teams
SWCPICH4.MAP	This pitch graphic relates to certain teams
SWCPICH5.MAP	This pitch graphic relates to certain teams
SWCPICH6.MAP	Pitch graphics for training

3.2.0 Save Yourself Some Work

And download the original graphics in ILBM and PNG format ready to edit and move to section 4.

3.3.0 Want to Know How It's Done

Use SWOS Editor to convert all image except pitch graphics to ILBM format.

In order to convert the pitch graphics (SWCPICH1.MAP to SWCPICH6.MAP) there is a longer process.

Open shell in Amiga workbench and navigate to the folder where the files that are to be edited are located.

To do this use the following syntax:

```
cd DH0:Edit/RAW
```

Use the file de-cruncher 'xfdDerunch' to uncompress the data by typing the following:

```
xfdDerunch SWPICH1.MAP
```

Once uncompressed the files need to be converted to an editable format, ILBM. To do this use the Amiga program ArtPRO and it must be version 0.9.
RAW INTERLEAVED > ILBM

To do this you need to calculate the image size:

Image file size (Bytes) = Image Width (pixels) X Image Height (pixels) X Bitplanes (4)

NAME	DESCRIPTION	FILE SIZE (BYTES)		IMAGE SIZE (PIXELS)	
		ORIGINAL	DECRUNCHED	WIDTH	HEIGHT
SWCPICH1.MAP		13,391	45,592	16	5,699
SWCPICH2.MAP		12,497	39,448	16	4,931
SWCPICH3.MAP		14,314	43,032	16	5,379
SWCPICH4.MAP		12,124	39,832	16	4,979
SWCPICH5.MAP		13,571	44,312	16	5,539
SWCPICH6.MAP	Training Ground	6,883	31,384	16	3,923

They are now in an editable format... almost.

Deluxe paint needs to be used to get the correct colour palette.

Open up a pitch file click yes to change resolution to suit.

Copy to new page.

Open a screen grab image to get the colour palette.

Select no to change resolution.

Press 'J' to switch back to the pitch image.

Now the image has the correct colour palette.

Save the image.

The image is now too wide.

Transfer the image across to Windows and use Gimp to get the image back to 16 pixels wide.

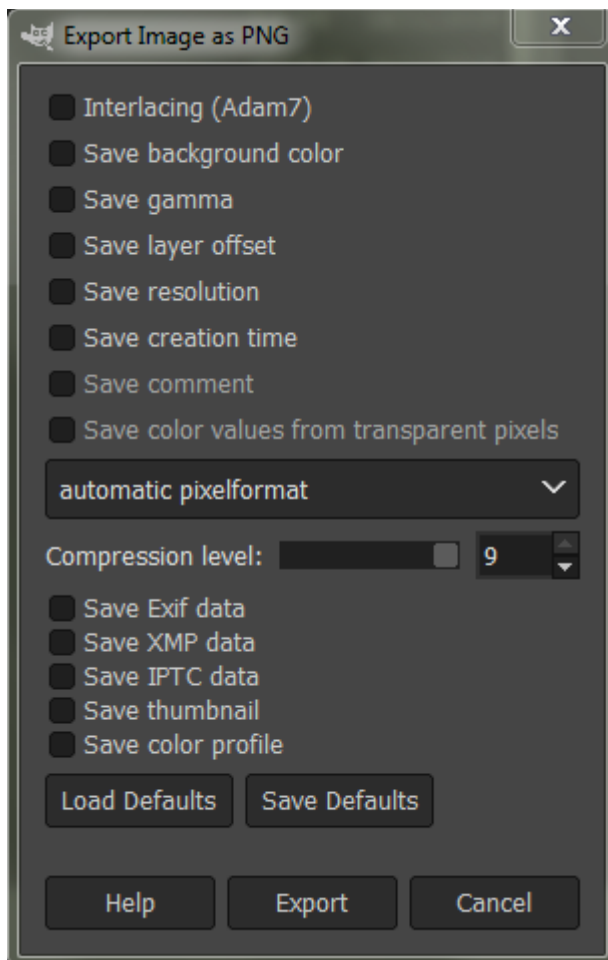

Now the image is ready to be edited.

4.0.0 SWOS Pitch Graphics Converter Program

This is used to convert the images into a manageable sprite sheet that is easier to edited and then converted back to the original image dimensions.

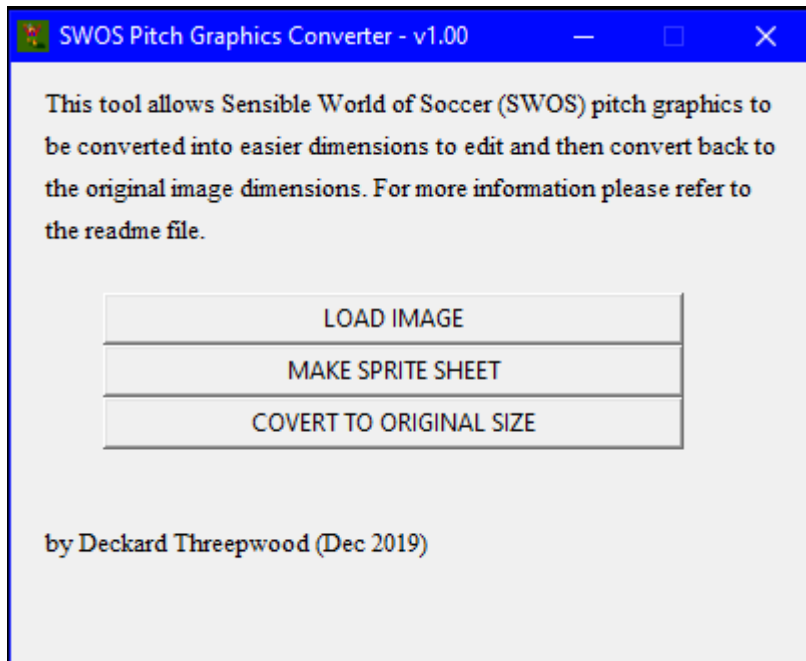

4.1.0 Preparing the Image

Before the program can be used the image must be in PNG format. Use gimp to export ILBM image as PNG, uncheck all options:

Once in this format the program can be used to convert the tall sprite sheets into a more manageable editable canvas size.

4.2.0 Using the Program

1. Click the “LOAD IMAGE” button and choose one of the pitch graphics e.g. “SWCPICH1”. The image must be in PNG format.
2. Then click the “MAKE SPRITE SHEET” button.
3. A new image will be created in the same folder named “SWCPICH1.png--NEW_1.PNG”
4. Edit the Graphics within this file to using GIMP.
5. Do not change the file name or path.
6. Use the converter and click the “LOAD IMAGE” button and again choose the original file of the graphics you have edited e.g. “SWCPICH1.png”
7. Click the “CONVERT TO ORIGINAL SIZE” button. A new image will be created in the same folder named SWCPICH1.png--NEW_2.PNG.
8. This file is your edited graphic back in to the same dimensions as the original.
9. GIMP needs to then be used to convert the image back to a ILBM image with an indexed 16 colour palette.

5.0.0 Editing Graphics

5.1.0 Required GIMP Plugins

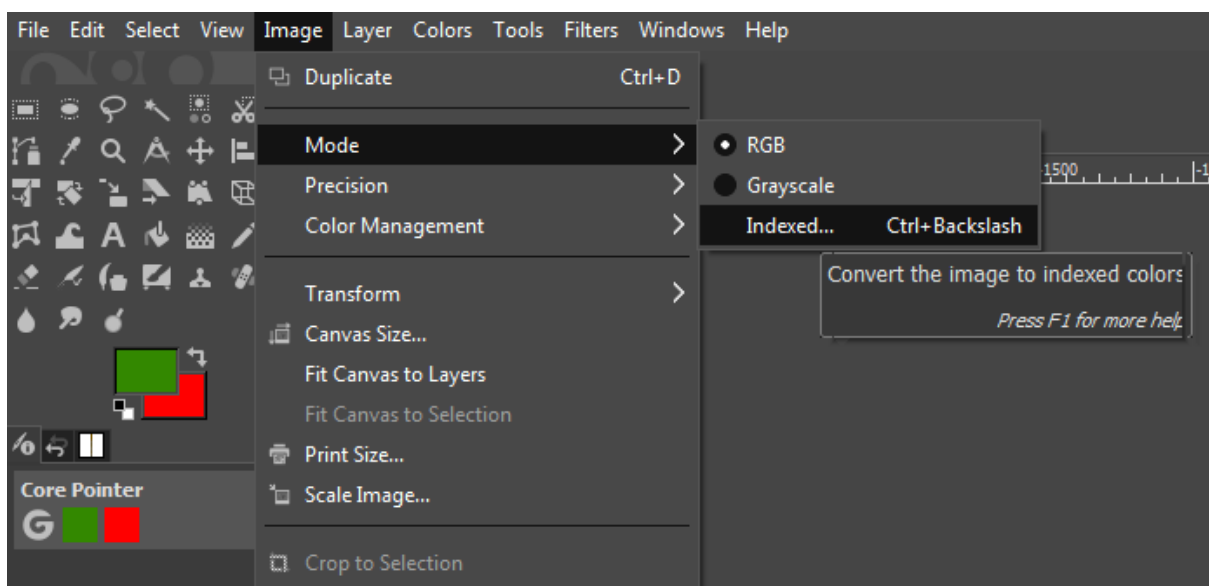

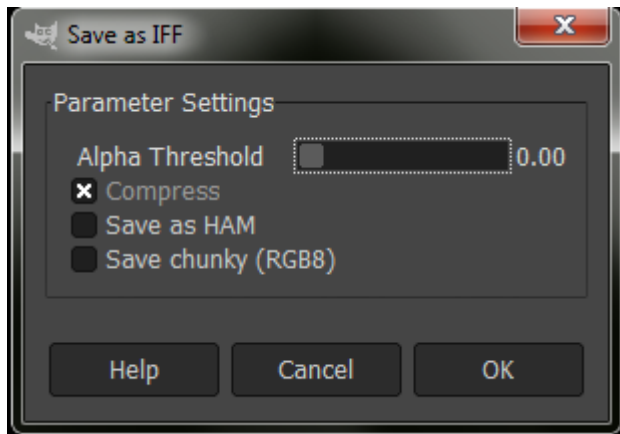

- IFF/ILBM module

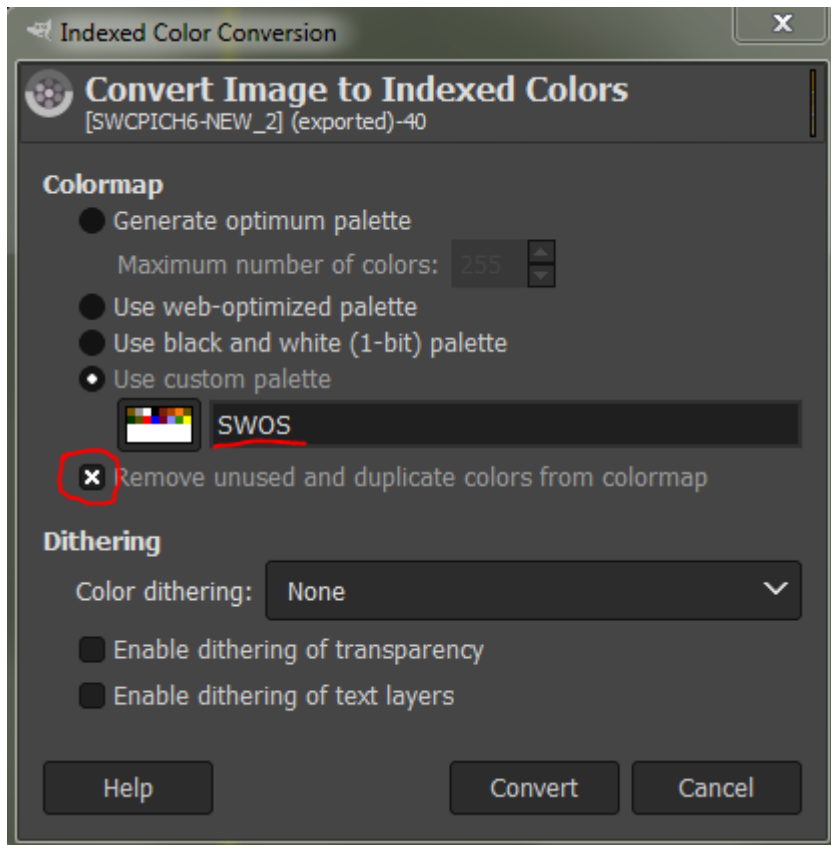

5.2.0 Useful GIMP Plugins

- Create guides every x pixel
- Export tiles
- Fuse layers

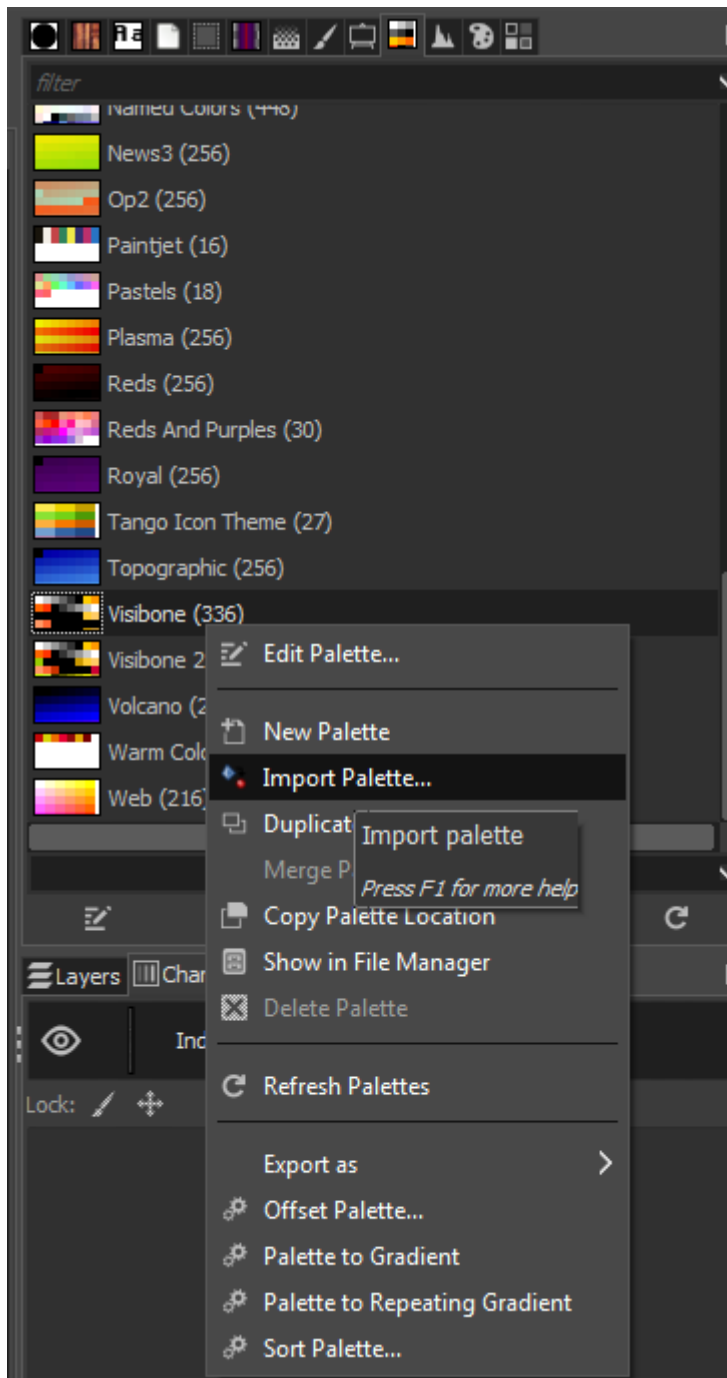

Once the graphics have been edited, use the program to convert the image back to its original tall sprite sheet dimensions.

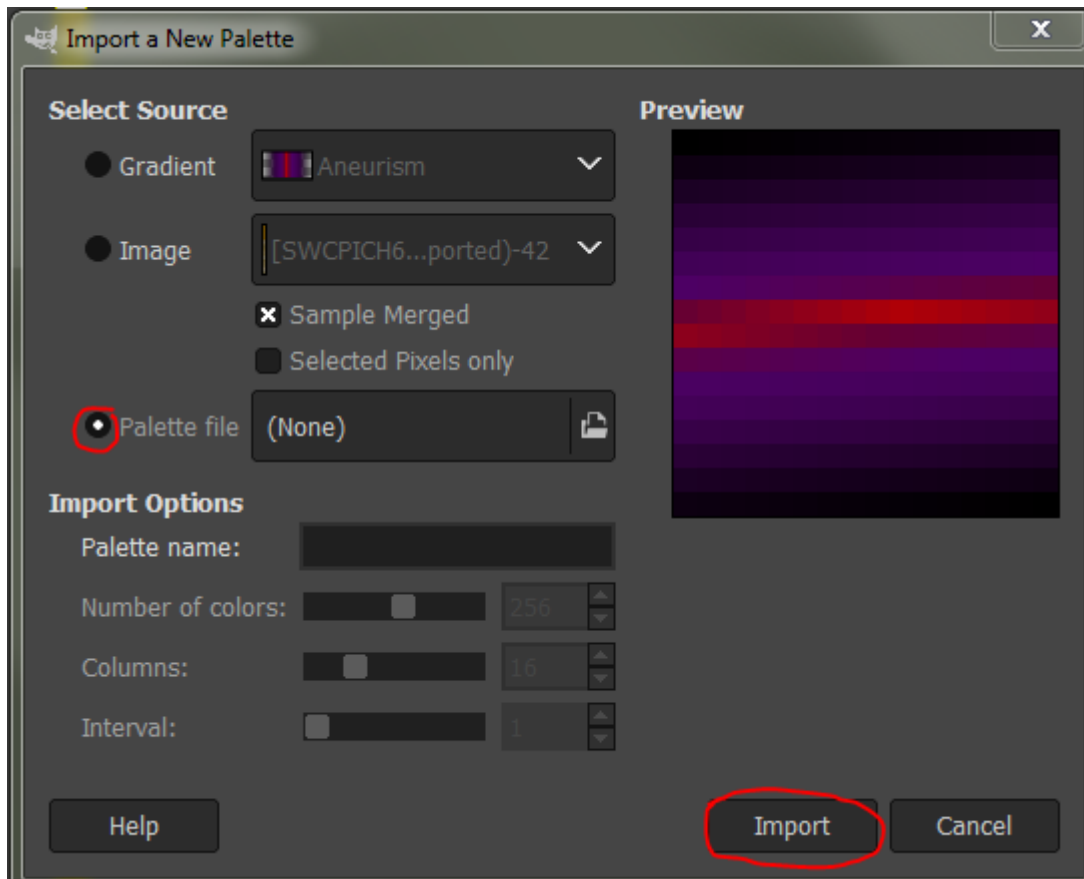

Use GIMP to export images back to ILBM format using following settings:

Save colour map from screen grab image or download the colour map file.

5.3.0 Covert the Image Back to Work in The Game

Use ArtPRO V0.9 on the Amiga to convert ILBM images back to RAW/MAP format.

ILBM > RAW INTERLEAVED

The edited files do to not have to be compressed.

6.0.0 Credits

Thanks to Dom Cresswell aka (Hungry Horace) for sharing knowledge on how to do this.
